

Chris Tham

artist, consultant, cyclist, designer, musician, photographer, world traveller

I'm Chris Tham, an outrageous actualiser based in Sydney. I'm the founder and Junior Janitor of Hello Tham, a boutique strategy consulting company.

I live in Sydney, and love art, cycling, design, fashion, photography, music, and travel (not necessarily in those order). My work life has focused on technology and strategy, mainly in the finance industry.

This website has been built using a design system called Rosely.

Superpowers

AI Agents have skills. Humans have superpowers :-) My top three superpowers are my abilities to influence, think differently and be passionate.

Everyone has superpowers, skills or attributes that they possess that sets them apart from other people.

My top 3 superpowers are:

- **The ability to connect and empathise with people, and to be influential** - one colleague has even referred to me as an "evangelist." In my role as a strategist, I have the ability to relate to people and their motivations and concerns, and influence a better outcome for them and the organisation. I have led teams, coached and mentored individuals, guided and delivered organisational strategies that have made a difference. I use my skills each week in my consulting career, and also when teaching undergraduates and masters students at Torrens University.

- **The ability to think differently, and solve problems creatively** - at the heart of innovation is the need to look at things and situations from a different angle, to provide fresh and unique perspectives and to challenge herd thinking. My career has been full of forged paths, I established one of the earliest successful enterprise architecture practice in a large Australian organisation (MLC) and wrote my own job description, and created norms and roles which are now prevalent in the industry. I was an early pioneer in enabling citizen data scientists, and I deployed an LLM (GPT2) in 2018 to classify support calls into categories.
- **The ability to be passionate, and be able to dive deeply and learn quickly on many topics** - I am intensely curious about many topics (including the nature and concept of how we perceive reality). I love researching, learning and absorbing everything I can about topics that interest me, ranging from philosophy, Buddhism, music, photography, investment theory, developing websites and apps, and leveraging artificial intelligence to deliver outcomes. Often my passions can be useful to organisations and other people. For example, I have participated and led many Proof of Concepts to explore new technologies and help realise benefits. I am able to pick up new skills quickly and use them to provide outcomes.

Self evaluation against SFIA9:

Writing on Life, the Universe and Everything.

All of my long-form thoughts on life, the universe, and everything, collected in chronological order.

These articles are where I explore thoughts on various topics. The collection arranged chronologically so you can follow how these perspectives have evolved over time.

Work History

My professional career and work experience over the years.

I have a background in software engineering, solution architecture, and technical leadership. Here is a summary of my professional journey.

Education

My academic background and qualifications.

I am a lifelong learner. Here is a summary of my formal education and academic achievements.

Websites I have made.

I've worked on tons of little projects over the years but these are the ones that I'm most proud of.

Many of these projects are open-source, so if you see something that piques your interest, check out the code and contribute if you have ideas for how it can be improved.

Things I have created.

I love creating all sorts of things. Here is a selection of music and videos that I have made.

This page gathers a selection of orchestral and electronic music I have composed, arranged, produced, and shared, including studio work, live-inspired experiments, and personal creative milestones.

Things I use and love.

Here's a big list of all of my favorite stuff, that I use everyday, or at least whenever I can. I love using good quality tools and equipment.

Over the years, I've refined this setup to focus on tools that are reliable, thoughtfully designed, and a joy to use. Whether it's software, computing gear, music production equipment, audio-visual components, or photography kit, each item here has earned its place through frequent use and long-term value.
